

## CLARK'S PATENT DIAMOND LAMPS FOR INDIA AND THE COLONIES.

What is more desirable than a good light?—The Diamond Lamps are, beyond doubt, the best.—They burn admirably under the Pankah.—They give the light of ten candles, and burn for twelve hours without attention.—Are so simple that they cannot be mis-managed.—The Table Lamp, (instead of having an upper shade and under dish as formerly) have now only one enamelled shade—the great advantages arising therefrom will be appreciated by the Indian public:—these improvements also enable the Company to charge less for their Lamps than they have hitherto done.—The public are also saved the expense of under-dishes, and the inconveniences arising from the dishes being broken—for, by the admirable arrangement of this new Lamp, the under-dish is dispensed with, and the upper shade is also less bulky than formerly.—This upper shade being enamelled, it does not soil and look discoloured like ground glass—it only requires wiping, and not washing—thus, breakage is a rare in this respect.—The enamelled shades are far preferable to ground glass—they are much stronger and look more elegant—the base of the shade is left clear, that a good light may be reflected on the table; and, also that persons may see how to regulate the light, so as to prevent the lamp smoking.

The Table Lamps, varying in price from £3 3s. complete, to £1 12s. can be had in lacquer or bronze, or in bronze in relief, which is very handsome—the price is regulated according to the size and design of the lamp—for they all give the same light. The Table Lamps, fitted with slate pillars ornamented, are very much recommended for their elegance and durability—the price is £1 15s. complete.—The Table Lamps, with cut crystal glass pillars, vary in price from £6 5s. complete, to £2 10s.—These lamps are solid glass, and are much recommended.—Table Lamps can be had also from £7 complete, to £9 3s.

The Hanging Lamps, with two, three, four or more burners, are very considerably improved—they are so simple in construction that servants cannot mis-manage them.—These lamps can be had in lacquer or bronze, or in bronze in relief—each burner gives the light of ten candles, and a three-burner lamp will illuminate a large apartment:—the Hanging Lamp with two burners is very handsome and complete for £11 5s., and with three burners, for £14 5s.—Sewing or Writing Lamps, or Sideboard Lamps, or Lamps to stand on brackets, are also fitted on this new principle, and the light is protected from the draught of the Pankah—the price is, complete, £3 12s. either in lacquer or bronze.

Bracket Lamps either lacquered or bronzed for fixing to the wall, very handsome and complete for £9 5s.—Back Lamps, for passages, or for Wall lights, very strongly made, either in lacquer or bronze, £2 12s. 6d. complete.

Two-light Table Lamps for large tables (or for mess rooms) either in lacquer or bronze, or in bronze in relief, for £7 5s. complete—this lamp has a very handsome and substantial appearance.

The Star Light Night Light burns Mosquitoes, and cannot be extinguished by insects, or by draughts of air.—It is calculated that by having this light in the bed chamber the insects will be attracted to it, and thus keep these intruders away from the bed side—the price is 7s. 6d. complete, the mortars are 1s. per box, each box containing twelve mortars.

The Diamond Billiard Lamp is the only effective Billiard Lamp that has yet been made for India. It lights the table admirably, and will burn well under the Pankah or in draughts of air—it turns always off the table to be trimmed—so it cannot be mis-managed. Please send the height of the room from floor to ceiling for which the Billiard Lamp is required. The price is for a four-light lamp complete, £10, and for a six-light lamp, complete, £12—each six-light is worth more than the £2 extra to the customer. It will be observed that the Diamond Lamps are now suitable for every use—a result that has never before been attempted by any Lamp manufacturer for India.

The Company supply Candle Branches, Candle Chandeliers and Candlesticks.

Royal Wax Candles made expressly for warm climates, 11s. per doz. lbs.

N. B.—The Company trust that their customers will make known to their friends and residents in India the good qualities of the Diamond Lamps, and thus prevent the purchase of any more common Lamps, which only prove a disappointment to all who buy them.—Whatever kind of Diamond Lamp you may have, the shade of that lamp will fit any other Diamond Lamp. Now this must be admitted to be a most important feature and a great acquisition, for by this their customers are saved the enormous trouble that arises with every other lamp, in consequence of the shades breaking, and there being much difficulty in procuring shades to fit the lamps.

Orders are executed with extreme care, so that every article must render satisfaction. An extra cotton holder and glass handle is always given with each lamp, so that the lamp cannot become damaged, and thereby unfit for use. All necessary directions are on each lamp cotton box.
